Life in Motion

Body Mass Index (BMI) is the measure of health and fitness endorsed by the Surgeon General of the United States. It takes into consideration the height and weight of a person to give an accurate index of what his/her weight should be. A BMI of up to 24 is considered healthy. Any number between 25 - 30 means the person is overweight. A reading of over 30 is an indication of obesity, placing the individual in serious danger of developing heart disease, high blood pressure, diabetes and other ailments.

BMI Below 25
Healthy Weight
Candidate for BeSlim™
Philosophy and meal
replacements for
Optimal Health.

BMI 25-30
Overweight
At higher risk for cardiovascular
disease, diabetes, etc.
Great candidate for the 5 & 1 Plan
and BeSlim™ Philosophy.

BMI 30+
Dangerously Overweight – Obese
Will possibly develop cardiovascular disease, heart disease, diabetes,
etc., without intervention. Our 5 & 1 Plan can be lifesaving in helping
to lower your weight. You may potentially lower or eliminate many
medications such as diabetic, blood pressure, and lipid lowering
drugs. By using our BeSlim™ Philosophy of permanent weight control,
you can return to a healthy weight and remain there!
